

# Wood Adhesives MINOS WOOD ADHESIVE

**Technical Data Sheet** 

Reviewed: 02.02.2016

## **DESCRIPTION**

**MINOS WOOD ADHESIVE** is a white waterbased, thixotropic, fast curing wood adhesive based on PVA, which dries transparent. Offers a high strength bond, resistant to heat, aging, vibrations and shocking. Does not stain, it is odorless, and environmentally friendly. Suitable for interior applications.

# **ADVANTAGES**

- Excellent bonding strength
- Humidity resistance
- Temperature resistance
- Resistance to ageing
- Dries transparent
- Environmentally friendly

# **APPLICATIONS**

- Suitable for all wood constructions.
- · Bonding of hard and soft wood mitre joints.
- Bonding of MDF, plywood, veneers.
- Bonding plasterboard, polystyrene, cork, cardboard, fabric to chipboard and MDF.

# **INSTRUCTIONS FOR USE**

- All surfaces must be dry and clean from dust and grease and fit closely together.
- 2. Stir adhesive thoroughly before use
- Apply the adhesive with a brush, roller, spatula or directly from the nozzle.
- 4. Apply an even film of adhesive to one surface only.
- 5. Allow the adhesive to soak into the parts for some minutes.
- **6.** Assemble the joint whilst adhesive is still wet and apply light pressure.
- The use of clamps or press is suggested. The pressure must then be sufficiently high and evenly applied to the entire surface.

It is advisable to perform a suitability test prior to full scale application

### **CLEANING**

Clean all equipment immediately after use with water.

### REMARKS

- Do not use below 12°C and relative humidity >60%
- Ideal moisture content of the wood: 8 12%
- Significant irregularities reduce the contact surface and therefore will lead to unsatisfactory bonding results.

## **COVERAGE**

80 - 200 gr/m<sup>2</sup> depending on surface porosity and condition

# **TECHNICAL CHARACTERISTICS**

Consistency: Thick paste

Colour: White

Base: Polyvinyl acetate Dry film: Transparent Odour: Slight

**PH**: 4-5

Water solubility: Unlimited at 20°C

**Solids:** 50 ± 1% MVPF 01

Specific gravity: 1000 - 1060kg/m<sup>3</sup> 25°C

Viscosity: 50000 - 80000 mpas 25 °C BROOKFIELD

Open time: 15 - 20 minutes 20°C Initial bonding: 30 minutes 20°C

Clamping time:

Depends on surface, room temperature and humidity. We suggest indicatively 60 - 90 minutes at  $20^{\circ}$ C for one side application and wood humidity 10%: The joints obtained by using **MINOS WOOD ADHESIVE** show an excellent resistance to static loads. Moreover the good penetration of the dispersion into substrates and the excellent cohesive strength of the adhesive enable the making of bonded joints that, under shear stress in compression, show a breaking of the wood itself.

**Final bonding:** Subsequent processing of the bonded parts is possible after 3 - 5hours. Final strength is achieved after approximately 24 hours at 20°C.

**Application temperature:** 10°C - 35°C

# **STORAGE**

Products should be stored in a dry and cool place at a temperature of  $5^{\circ}\text{C}$  -35°C, away from sources of ignition. Protect from humidity and direct sunlight.

# **SHELF LIFE**

12 months from the production date in the above mentioned storage conditions. The product should remain in the original unopened packaging bearing the manufacturer's batch number.
